PRABHU AWASTHI

Freelance Unity Developer | Creative Technologist

Interactive installations, XR and event technology

Delhi NCR, India | +91 6391307609 | iamprabhuawasthi@gmail.com
Showreel: youtube.com/shorts/CPF3rxwpoMI | Portfolio: https://prabhuawasthi.vercel.app/ | LinkedIn: prabhu-awasthi

Available for freelance and contract work worldwide: remote, or on site in Delhi NCR and abroad by arrangement.

WHAT I BUILD

Unity developer with 2.5+ years of production experience building real-time applications for exhibitions, museums, auto expos, brand activations and live events. I take features from interaction design through build, hardware integration, on-site installation and show-day support.

- **Sensor-driven interactions:** Kinect and depth cameras, LiDAR interactive floors, touch surfaces, motion tracking and gesture interfaces.
- **Hardware integration:** Arduino, Raspberry Pi, DMX lighting and motion control, custom inputs wired into Unity.
- **AR / VR / XR:** immersive experiences for brand activations, experiential spaces and live exhibition settings.
- **Real-time 3D and projection:** projection mapping, real-time visualization and spatial tracking.
- **Computer vision:** camera-based installations and gesture-driven interfaces.
- **Custom Unity tools and shaders** (Shader Graph, HLSL) for event visuals and content pipelines.

SELECTED WORK

TATA ADAS Simulator - Bharat Mobility Auto Expo
Interactive driving simulation demonstrating six Advanced Driver Assistance System features, with scoring and real-time feedback for visitors.

Samudra Manthan VR - Mahakumbh 2025
Immersive VR experience for a live exhibition setting, with controller-based interaction and real-time narrative progression.

National Judicial Museum - Supreme Court of India
Multiple interactive exhibits for a public museum, built for clear visitor flow and reliable long-term operation.

PM Gati Shakti Interactive Platform
Unity visualization application combining 3D systems with layered interfaces, structured for future content expansion.

Kinect and LiDAR installations
Motion-tracking and gesture interaction systems, and LiDAR-driven interactive floors responding to physical movement.

TOOLS AND TECHNOLOGY

Engine and code: Unity 2D/3D | C# | Shader Graph | HLSL | Java | JavaScript | Three.js

Sensing and input: Kinect | LiDAR | Depth cameras | Touch surfaces | Computer vision | Gesture tracking

Hardware and show control: Arduino | Raspberry Pi | DMX | Motion and lighting control | Sensor integration

Immersive: VR / AR / MR | Projection mapping | Spatial tracking | Real-time 3D visualization

Engineering: Modular architecture | State management | Multiplayer | Profiling and optimization | Build and deployment | Git

HOW I WORK WITH STUDIOS

- Join an agency or studio team remotely and work to its creative direction, timelines and pipelines.
- Work alongside designers, AV engineers and stakeholders under live deployment constraints, through build, install and show-day support.

EXPERIENCE AND EDUCATION

Zibal Technologies - Junior Unity Developer, Vectra Air Traffic Control Simulation (Apr 2026 - Oct 2026). Owned the Flight Plan system, built Holding Pattern and Approach Monitor systems, worked on peer-to-peer multiplayer and led the full UI redesign.

Tagglabs Experiential - Software and Application Developer, Interactive Systems (Mar 2024 - Apr 2026). Production Unity applications for exhibitions, permanent installations and enterprise demonstrations.

Education: B.Tech in Computer Science, GLA University (2024, CGPA 8.33)
