PRABHU AWASTHI

Unity Developer | C# Developer

Real-Time Simulation and Product Development

Delhi NCR, India | +91 6391307609 | iamprabhuawasthi@gmail.com

Showreel: youtube.com/shorts/CPF3rxwpoMI | Portfolio: https://prabhuawasthi.vercel.app/ | LinkedIn: prabhu-awasthi

Open to relocation and to remote roles; able to work across time zones.

PROFESSIONAL SUMMARY

Unity and C# Developer with 2.5+ years of experience building real-time simulation software and product features. Currently on Vectra, an Air Traffic Control simulation platform, owning features from architecture and algorithmic flow design through implementation, UI, multiplayer integration and debugging. Strong foundation in object-oriented programming, SOLID principles, modular architecture, design patterns, state management and performance optimization, with earlier experience shipping automotive simulation and enterprise visualization applications.

CAREER HIGHLIGHTS

- Owned end-to-end development of the Flight Plan system for the Vectra Air Traffic Control simulation platform.
- Built the Holding Pattern and Approach Monitor systems and led the complete Vectra application UI redesign.
- Contributed to peer-to-peer multiplayer connectivity for offline and online simulation sessions.
- Supported a Vectra product demonstration and pitch to Civil Aviation Training College, Airports Authority of India.

TECHNICAL SKILLS

Programming: C# | Java | JavaScript | Object-Oriented Programming | Algorithms and Data Structures

Architecture: SOLID Principles | Design Patterns | Modular Architecture | System Design | Algorithmic Flow Design | Event-Driven Systems

Unity Development: Unity 2D/3D | Real-Time Simulation | UI Systems | State Management | Multiplayer | VR/AR/MR | Shader Graph | HLSL

Engineering Tools: Debugging | Profiling | Performance Optimization | API Integration | Git | Build and Deployment | Agile/Scrum

Interactive Systems: Kinect | LiDAR | Sensor Integration | Hardware Integration | Motion Tracking

Additional Technologies: React | Node.js | MongoDB | Three.js

PROFESSIONAL EXPERIENCE

ZIBAL TECHNOLOGIES PRIVATE LIMITED Apr 2026 - Oct 2026

Junior Unity Developer

Vectra - Air Traffic Control Simulation Platform

- Developed features for Vectra, a unified Unity platform that models end-to-end Air Traffic Control operations.
- Owned the Flight Plan system from interaction-flow design through application logic and UI implementation for simulated aircraft movements.
- Built the Holding Pattern and Approach Monitor systems, including simulation logic, interface behavior and operational workflows.
- Led the full Vectra UI redesign, restructuring screens and interaction flows to improve usability and operational clarity.
- Contributed to peer-to-peer multiplayer connectivity for offline and online simulation sessions.
- Used SOLID principles, modular architecture and algorithmic flowcharts to structure complex real-time features before implementation.
- Supported a product demonstration and pitch to Civil Aviation Training College, Airports Authority of India, Prayagraj.

TAGGLABS EXPERIENTIAL PVT. LTD. Mar 2024 - Apr 2026

Software and Application Developer - Interactive Systems

- Delivered production-ready Unity applications for exhibitions, permanent installations and enterprise demonstrations.
- Created reusable C# systems for UI workflows, interaction logic, state management and content pipelines across multiple applications.
- Integrated 3D assets, video playback, Kinect, LiDAR, sensors and hardware inputs into stable real-time experiences.
- Led debugging, performance optimization, build deployment and on-site support to maintain application stability.

SELECTED SIMULATION AND VISUALIZATION PROJECTS

TATA ADAS Simulator - Bharat Mobility Auto Expo
Developed an interactive driving simulation that demonstrated six Advanced Driver Assistance System features. Implemented scoring and real-time feedback systems around user performance. Designed the interaction flow to communicate complex automotive safety technologies through direct experience.

PM Gati Shakti Interactive Platform
Developed a Unity-based visualization application combining 3D systems with layered user interfaces. Structured the application with modular components to support scalability. Designed the technical foundation for future content and feature expansion.

Max Real Estate - Interior Design Application
Developed a real-time interior planning application for creating layouts and placing furniture. Implemented furniture-placement and material-selection workflows. Provided immediate visual feedback as users evaluated and changed design choices.

National Judicial Museum - Supreme Court of India
Developed multiple Unity-based interactive exhibits for a public-facing museum environment. Implemented interaction flows that supported clear narrative progression and visitor usability. Structured the applications for maintainability and reliable long-term operation.

KNOWLEDGE SHARING

Technical Educator - Unity and Game Development

- Authored and published a complete 2D Game Development course on Udemy and TutorialsPoint.
- Covered Unity architecture, UI flows, scripting fundamentals and deployment workflows through structured, hands-on lessons.
- Reached 35+ active learners across platforms and translated technical concepts for beginner and non-coder audiences.

EDUCATION

B.Tech in Computer Science | GLA University | 2024 | CGPA 8.33
Intermediate | Lucknow Public School | 2019 | CGPA 9.0
High School | Lucknow Public School | 2017 | CGPA 9.02
